EDUCATION

University of Wisconsin – Madison
B.S. Computer Science & Economics

Madison, WI
Expected May 2028

- Relevant Coursework: Programming 3, Linear Algebra, Statistics, Intermediate Macroeconomics, Machine Organization and Programming

TECHNICAL SKILLS

Languages & Frameworks: Java, Python, TypeScript, JavaScript, SQL, HTML/CSS, React, Next.js, FastAPI, Node.js, Tailwind CSS, scikit-learn

Cloud, Backend & Dev Tools: Supabase, Firebase, PostgreSQL, SQLite, REST APIs, Docker, Git, GitHub Actions

AI/ML/Other: Claude API, Groq API, OpenAI Whisper, scikit-learn, LLM Integration, Microsoft Excel, PowerPoint, Jira, Figma, Notion

EXPERIENCE

Undergraduate Learning Center – Computer Science Tutor
University of Wisconsin – Madison

Aug. 2026 – Present
Madison, WI

- **Selected to tutor CS 200/300** covering core Java fundamentals, OOP inheritance, recursion, ArrayLists, HashMaps, and Big-O time complexity analysis
- Conduct drop-in hours and one-on-one sessions, translating complex algorithmic concepts into concrete, debuggable examples for students from varied technical backgrounds
- Developing targeted supplemental problem sets addressing common misconceptions in data structures and OOP to support student comprehension beyond lecture material

Pain Context Innovation Lab – Research Assistant
University of Wisconsin – Madison | PI: Dr. Shinye Kim

Jan. 2026 – Present
Madison, WI

- **Reduced average time-to-clinic-match by ~40%** by architecting and deploying the clinic navigation module for a patient-facing web platform serving 100s of chronic pain patients
- **Cut average user lookup time from 5+ min to under 60 sec** by building responsive, real-time search and filter UI components in **React** with dynamic state management and debounced API calls
- **Integrated the NPPES NPI REST API** to dynamically query and filter **1M+ clinician records** by insurance type, specialty, and geographic location, surfacing the most relevant providers for each patient
- Collaborated with a 5-person cross-functional team of clinicians and developers across bi-weekly sprints, managing feature branches and conducting pull request reviews on GitHub

PROJECTS

Obscura | FastAPI, PyTorch, ONNX Runtime, Celery/Redis, React, TypeScript, Docker | [GitHub](#)

Sept 2026

- Cut face-detector p95 latency 265ms → 108ms (2.5×) by exporting YOLOv8 to ONNX Runtime with a hand-written NumPy inference pipeline
- Benchmarked YOLOv8-face vs. RetinaFace on the full WIDER FACE validation set (3,226 images), finding 0.644 vs. 0.434 AP at 2× the speed
- Built a privacy-first redaction pipeline (detection only, no face recognition, auto-deleted files) using ByteTrack to cut video compute without flicker

Vocalis | Next.js, TypeScript, FastAPI, Groq, Whisper, Docker, Firebase | [GitHub](#)

June 2026

- Engineered a real-time voice pipeline achieving <2s transcription latency on responses up to 3 minutes, integrating OpenAI Whisper with the Web Audio API
- Designed a scikit-learn model delivering structured interview feedback across 4 dimensions in under 3 seconds
- Built a full-stack AI mock interview platform for 100s of students, generating role-specific questions via Groq-hosted LLM

VitalLens | React, TypeScript, Supabase, Claude API, Recharts | [GitHub](#)

April 2026

- Won 2nd Place at BadgerAI Hackathon for a full-stack, patient-facing health platform built end-to-end
- Cut appointment prep time from 30+ min to under 5 min by auto-generating doctor prep questions from biomarker trends
- Built a Claude-powered PDF pipeline classifying 20+ biomarker types, with Supabase RLS ensuring HIPAA-aligned, zero cross-user data exposure

CAMPUS INVOLVEMENT

WACM – Undergraduate Activities Chair
University of Wisconsin – Madison

Jan. 2026 – Present
Madison, WI

- Selected as Undergraduate Activities Chair for Fall 2026; curate a monthly technical speaker series for 50+ members featuring engineers from Google, Microsoft, and Amazon

Women in Business Technology – VP of Systems
University of Wisconsin – Madison

Jan. 2026 – Present
Madison, WI

- Elected VP of Systems for Fall 2026; architect and maintain club website for a 100+ member organization, shipping 10+ feature updates per semester and integrating professional networking resources
- Connected 100+ members with 20+ industry professionals through platform-driven outreach and coordinated networking events each semester
